EDUCATION

University of Michigan, Ann Arbor, MI

Ph.D., Physics, *Expected*: Summer 2022

Massachusetts Institute of Technology, Cambridge, MA

B.S., Physics, June 2017

- Thesis: *Jet Substructure at the Large Hadron Collider*
- Thesis Advisor: Jesse Thaler

RESEARCH PROJECTS

Microstate Counting

With Prof. Leopoldo A. Pando-Zayas

July, 2017 - Present

Leinweber Center for Theoretical Physics (LCTP)

- Studying microstate counting of the Bekenstein-Hawking entropy of supersymmetric asymptotically AdS black holes.
- Performing numerical computation of the topologically twisted index of magnetically charged asymptotically AdS_4 black holes.

Jet Substructure Studies with CMS Open Data

With Prof. Jesse Thaler

January, 2015 - May, 2017

Center for Theoretical Physics (CTP)

- Performed the first ever physics study on the CMS Open Data to test the QCD $1 \rightarrow 2$ splitting function.
- Extracted relevant physics information (particles, jets, trigger information, etc) from over 2 Terabytes of CMS Open Data consisting of 36.1 pb^{-1} of 7 TeV proton-proton collisions at the Large Hadron Collider.
- Designed an ASCII file format to hold particle collision data to store relevant data from the raw ROOT files.
- Performed basic substructure analysis and a study of the 2-prong substructure of jets in C++.
- Generated and computed comparable samples with Monte Carlo parton shower generators for overlay with results from data.

Control System for an Ion Source for the IsoDAR Experiment March, 2016 - March, 2017
Prof. Janet Conrad's Group *Laboratory For Nuclear Science (LNS)*

- Built a control system for automatic controlling and monitoring of a multi-cusp ion source for the IsoDAR (Isotope Decay-at-Rest) experiment to study the existence of sterile neutrinos.
- Designed and implemented data transfer protocols to talk to electronics via Arduinos.
- Implemented low latency two-way communication from the control computer to individual electronic components via a central Raspberry Pi server and corresponding Arduinos.

Numerical Analysis of the Ising Model using MCMC September, 2016 - January, 2017
With Dr. Homer Reid *Department of Mathematics*

- Built a MC solver in C++ for the Ising model based on the Metropolis–Hastings algorithm, with the eventual goal of generalizing it for numerical modelings for lattice gauge theory.
- Computed critical exponents and modeled phase transitions numerically.

Control System for an Environment-Sensing UAV December 2013 - June 2014
Senseable City Lab and Interactive Robotics Group *Media Lab & CSAIL*

- Developed a JavaScript application to control and monitor an environment sensing UAV by live transmission of user actions.
- Implemented real-time data visualization using data-stream sent back by the UAV- chlorophyll and phycocyanin level, hyperspectral images, UAV position and altitude.

CONFERENCES AND SEMINARS

- “Jet Substructure Analysis with CMS Open Data”, BOOST 2017, *Jul. 2017*

AWARDS AND HONORS

- Philip Morse Memorial Award, *MIT Physics Department, 2017*

TEACHING

Graduate Student Instructor	Winter 2018
Physics 241- Elementary Laboratory II <i>University of Michigan</i>	
Graduate Student Instructor	Fall 2017
Physics 141- Elementary Laboratory I <i>University of Michigan</i>	
Grader	Fall 2014 - Fall 2016
8.022 Physics II, 8.03 Physics II, 8.044 Statistical Physics I <i>Massachusetts Institute of Technology</i>	

OUTREACH

www.physicsden.org

Fall 2016 - Present

Built and working on a website that converts physics research papers into guided problems to communicate research and to provide starting researchers a place to start.
